

TIPS TO PROTECT VAPE TANK FROM LEAKING

#1: FILL TANK CAREFULLY

You just need to pay close attention and take your time to fill vape tank carefully because sometimes it's possible to accidentally squirt e-juice into the tank's chimney.

#2: CHECK O-RINGS AND TANK'S SEALS

Check all seals are tightened and lined up of your tank which you bought from vape shop uk. Also, don't forget to check that the tank exterior and O-rings are not damaged.

#3: CHECK FOR CRACKS

Check your tank for cracks or any other type of damage. If your glass is cracked, you can simply replace the tube. It is an inexpensive and simple solution.

#4: KEEP YOUR TANK VERTICALLY

Some of the tanks are not build to remain at the horizontal position for long period of time. For these types of vape tanks, try to keep your vaping kit in the vertical position if you are not using them for a long time.
